BreachPlan Connect®

Breach Response Plan

for Senior Management

Do you have a cyber-focused incident response plan, and can you access it at a moment's notice from your mobile phone? Most organization don't. In fact, many organizations delegate breach response to their IT Departments. But while IT recovery is clearly critical, it's only one component of effective breach response.

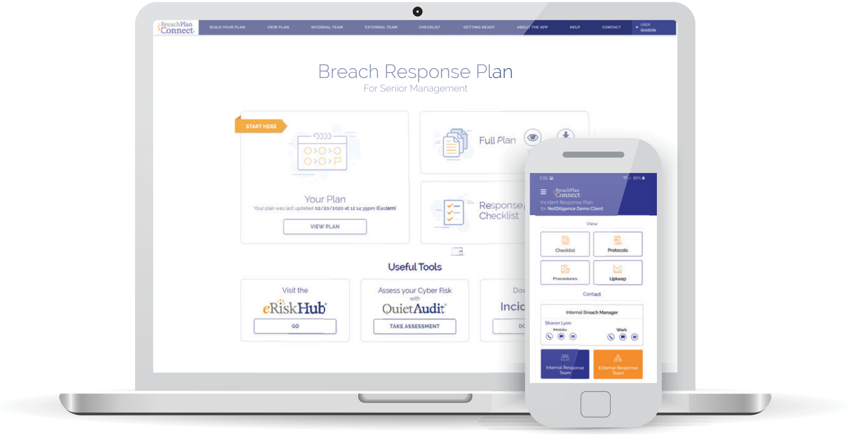
Senior managers (CEO, CFO, COO, CIO/CSO, etc.) are responsible for how their organization prepares for and responds to a cyber incident, regardless of whether the incident is a malicious ransomware attack or a data breach mishap.

It's a compliance issue, and it's also good fiscal risk management. Prompt and effective response can help minimize the cost of an incident. And active participation by senior managers can help defend against a charge of 'negligence,' reducing potential litigation and regulatory exposures.

Breach Plan Connect®, powered by NetDiligence®, is a turnkey solution designed to help your senior managers oversee and coordinate your organization's response to a cyber incident.

- Securely hosted software-as-a-service (SaaS) solution
- Features guidance on how to 'get cyber ready'
- Comes pre-loaded with a best-practices breach response plan template
- Easily customized for your organization
- Includes a mobile app, for convenient access and secure communications even if company systems are compromised
- Mobile app syncs with the SaaS every time a user logs in, so information is always up to date

Breach Plan Connect features an online "Build Your Plan" tool that guides your organization step-by-step in developing a customized Breach Response Plan.



Breach Response Plan
For Senior Management

Your Plan
Your plan was last updated 02/20/2020 at 12:14:35pm (Eastern)

You'll start by building out your internal and external (third-party) breach response teams. Once that's done, the tool guides you through establishing your organization's foundational protocols, such as response priorities, severity classifications, and internal communications guidelines. Finally, the tool helps you create action-oriented procedures for responding to a live event, including the steps to take and the proper sequence in which to take them.

At the end of the process, you'll have a published Breach Response Plan that makes it easy for senior managers and counsel to: a) monitor the overall response, and b) provide guidance and authorization as needed to tactical teams, such as IT and related third-party experts.
